

Amendment to the Abstract:

The Abstract has been amended. A revised Abstract is attached.

Abstract

B1D
An asynchronous FIFO circuit has
a memory;

— asynchronous reading-read and writing-means-of-write for reading a predetermined amount of data from and of-reading the predetermined amount of data into the memory on a first-in-first-out basis;

— an error write counter of counting counts-up by 1 if the predetermined amount of data written into the memory contains an error;

— an error read counter of counting up by 1 if the predetermined amount of data read from the memory contains an error; and a comparator for

— comparing-means-of-comparing a value of the error write counter with a value of the error read counter, the comparing-means-comparator outputting a logic level of 0 when the value of the error write counter is coincident with the value of the error read counter, and the comparing-means-comparator outputting a logic level of 1 if the former value is different from the latter value.
